Profile

Computer Engineering student with practical experience developing web applications and automating real-world workflows. Interested in machine learning and natural language processing, which I am currently studying.

Experience

Administration — Tio Tom Arenas | Punta del Este, Uruguay

January 2023 — Present

• Develop tools using JavaScript, Excel, Power Query, and Google Apps Script for reconciliations, data processing, and reporting.

• Use these tools daily to reduce repetitive tasks and make information easier to review.

• Manage payments, suppliers, cash and bank reconciliations, and accounting documentation.

Projects

Accounting Reconciliation App — Personal Project

• Web tool I use daily at work to reconcile accounting records, cash, and bank transactions from Excel files, with configurable matching rules, manual review, and exports.

• Developed with AI assistance. Data is processed in the browser without being sent to external services.

Technologies: JavaScript, HTML5, CSS3, SheetJS.

Event Management System — University Project (Udelar)

• Web and desktop system for managing events, users, and registrations. Contributed to business logic, interfaces, testing, and Git-based integration.

Technologies: Java 21, Swing, Apache Tomcat, Maven, JUnit, Git.

Gym Membership and Payment Management System — Project for a Gym

• Web application for managing memberships and recording payments, developed to address an operational need at a gym.

MASA — Weight and Nutrition Tracker | Personal Project

• Web and Android app for tracking meals, weight, and nutrition goals, including calories, macronutrients, and trends.

• Includes data synchronization and weight trend calculations.

• Uses a public food database translated and adapted for local use.

Technologies: JavaScript, HTML5, CSS3, Capacitor, Supabase.
